

AREEJ ANWAAR

SOFTWARE ENGINEER

CONTACT

+92-330-2006525
areejanwaar17@gmail.com

SKILLS

Languages: C++, Python

Web: HTML, CSS

Database Technologies:

MYSQL, MongoDB, Oracle SQL

Tools: VS Code, MS Office, Canva, Figma

Concepts & Methodologies:

Software Development Life Cycle (SDLC),
Object-Oriented Programming (OOP),
Data Structures

Soft Skills:

Teamwork, Communication Skills,
Leadership abilities

PROFILE

Motivated Software student with strong skills in C++, Python, and web development. Passionate about building scalable, based on user-centric solutions and eager to gain hands-on experience through internships.

EDUCATION

Bachelor of Science in Software Engineering

Air University | Islamabad

GPA: 3.17/4.0

FSc Pre- Engineering (FBISE)

OPF Girls collage | Islamabad

2021-2023

Marks: 894/1100 (Grade: A1)

Matriculation (FBISE)

OPF Girls collage | Islamabad

2019-2021

Marks: 1055/1100 (Grade: A1)

EXPERIENCE

Volunteer | Al-Khidmat Foundation

September 2024 – Present

- Participated in community outreach and welfare projects.
- Assisted in organizing charity drives and awareness campaigns.
- Assisted in organizing charity drives and awareness campaigns.
- Helped document and report outreach outcomes for internal review and future planning.

Humanitarian Worker & Graphics Designer

| KARMA x NUST (Gaza Relief Initiative)

June 2023 – Present

- Collaborated with KARMA and NUST student body to raise funds and provide aid for Gaza.

PROJECTS

-Ticket Management system (Terminal)

Language: C++

- Developed a console-based system to manage ticket bookings, cancellations, and customer records.
- Added error handling and validation to ensure smooth user interaction.

-Space shooter game (SFML Graphics)

Language: C++

- Designed a 2D arcade-style shooter game using SFML graphics library.
- Implemented player controls, scoring system, collision detection, and enemy.
- Optimized rendering for smooth gameplay experience.

-Hotel Management Database

Language: Oracle SQL

- Designed promotional posters, social media content, and event graphics to support the cause.
- Designed promotional posters, social media content, and event graphics to support the cause.
- Contributed to digital storytelling efforts to amplify the voices of affected communities.
- Supported event planning and coordination for fundraising drives and awareness sessions.
- Ensured visual consistency across campaign materials to strengthen brand identity and impact.

Frontend Designer & AI/ML intern | CHRIO (Cricket Startup Fast)

June 2025 – August 2025

- Designed dashboard pages for Employee and Admin portals.
- Redesigned CHRIO's official website to be fully responsive and created a mobile version using Figma.
- Conducted experimental work in Python to detect cricket balls and map DRS trajectories using AI/ML techniques.

- Created a relational database to manage hotel reservations, customer records, and billing.
- Designed normalized schemas with constraints to maintain data integrity.
- Wrote complex SQL queries for reporting and analytics (e.g., occupancy rates, revenue tracking).

-Covid-19 Data Analysis

Language: Python (Scikit-learn, stats models)

- Analyzed real-world Covid-19 datasets to identify trends and correlations.
- Applied statistical models and machine learning techniques for prediction and regression analysis.
- Visualized results using Matplotlib for clear insights.

-Golfing Assistance System (socket programming)

Language: python (OpenCV)

- Built a real-time system to assist golfers by tracking ball trajectory using computer vision.
- Implemented socket programming for communication between client and server modules.
- Used OpenCV for ball detection and trajectory mapping.

-Water Level Indicator

Digital Logic Design (DLD)

- Designed a hardware-level circuit to monitor and indicate water levels.
- Implemented logic gates and flip-flops to trigger alerts at threshold levels.
- Simulated the design using digital logic tools for verification

-Ecommerce pizza shop website

- Made using HTML, CSS, JS. Java + mysql
Developed a full-stack ecommerce platform for online pizza ordering.
- Designed front-end UI with responsive layouts and integrated backend using Java Servlets.
- Implemented MySQL database for order management, user authentication, and inventory tracking.
- Deployed on Tomcat server with complete end-to-end functionality.
